Document Specifications

1.1 Purpose

The following document describes and defines both the functional and non-functional requirements of the Nature Notes web app, to be implemented in Sprint 1.

1.2 Scope

The scope of Sprint 1 encompasses the goal of creating a minimum viable product, also known as an MVP. This will be accomplished through the integration of a free weather-based API, a simple web page setup with easy-to-understand UI, and a simple in-browser music player.

2 Functional Requirements

ID	Requirement Description
<i>FR 1</i>	The website shall be hosted through a backend service, allowing users to access and use its features.
<i>FR 2</i>	The website shall make use of openweathermap's API, using it to fetch weather data based on city name or longitude and latitude coordinates.
<i>FR 3</i>	The website shall be able to obtain the user's current location, using it to get the weather data from the user's position.
<i>FR 4</i>	The website shall make use of a music player to play different songs, according to the current weather at a given location.
<i>FR 5</i>	The website shall be able to control the flow of playing music, by ways of play/pause, or skipping back or forward.

3 Non-Functional Requirements

ID	Requirement Description
<i>NFR 1</i>	The User Interface of the website shall be easy and intuitive to understand, keeping in line with the goals of the website.
<i>NFR 2</i>	The website shall allow users to access its features regardless of the user's status.
<i>NFR 3</i>	The website shall not experience excess lag while fetching data or playing music.
