

4.1	Create Postgres Database using Neon	8
4.2	Implement automatic weather fetches and updates so that music changes as weather in the last given area does.	5
4.3	Implement automatic location selection, selecting the user's last selected location upon login.	3
4.4	Create backend logic to maintain user accounts with recent locations, preferred moods, and favorite music types.	8
5	Implement small UI visuals so that the page corresponds slightly to the current weather at the given location.	2
6	Maintain strict data security so that user data is not publicly obtainable.	5

Sprint 2 END
